## Summary

This document lists the stream gauging stations which make up the Department of Natural Resources, Mines and Energy stream height and stream flow monitoring network.

Data collected under the Stream Gauging Station Network are published on the department's [Water Monitoring Information Data Portal](#).

Other data types are also collected at stream gauging stations, including rainfall and water quality. Further information is available on the [Water Monitoring Information Data Portal](#) under each station listing.

Attachment 1 – Stream Gauging Station Network .....	1

## 1. Network background

The primary driver for the Stream Gauging Station Network is to meet legislative requirements defined in Chapter 2, Part 3 of the *Water Act 2000* (Qld). It also provides information for the Bureau of Meteorology's Queensland Flood Warning Network.

The department manages, operates and maintains approximately 400 stream gauging stations across Queensland. Approximately 170 of these sites also collect time series water quality information including conductivity and temperature. Routine reviews are carried out on the Stream Gauging Station Network to ensure it is fit-for-purpose, cost-effective and that site records are accurate within corporate databases.

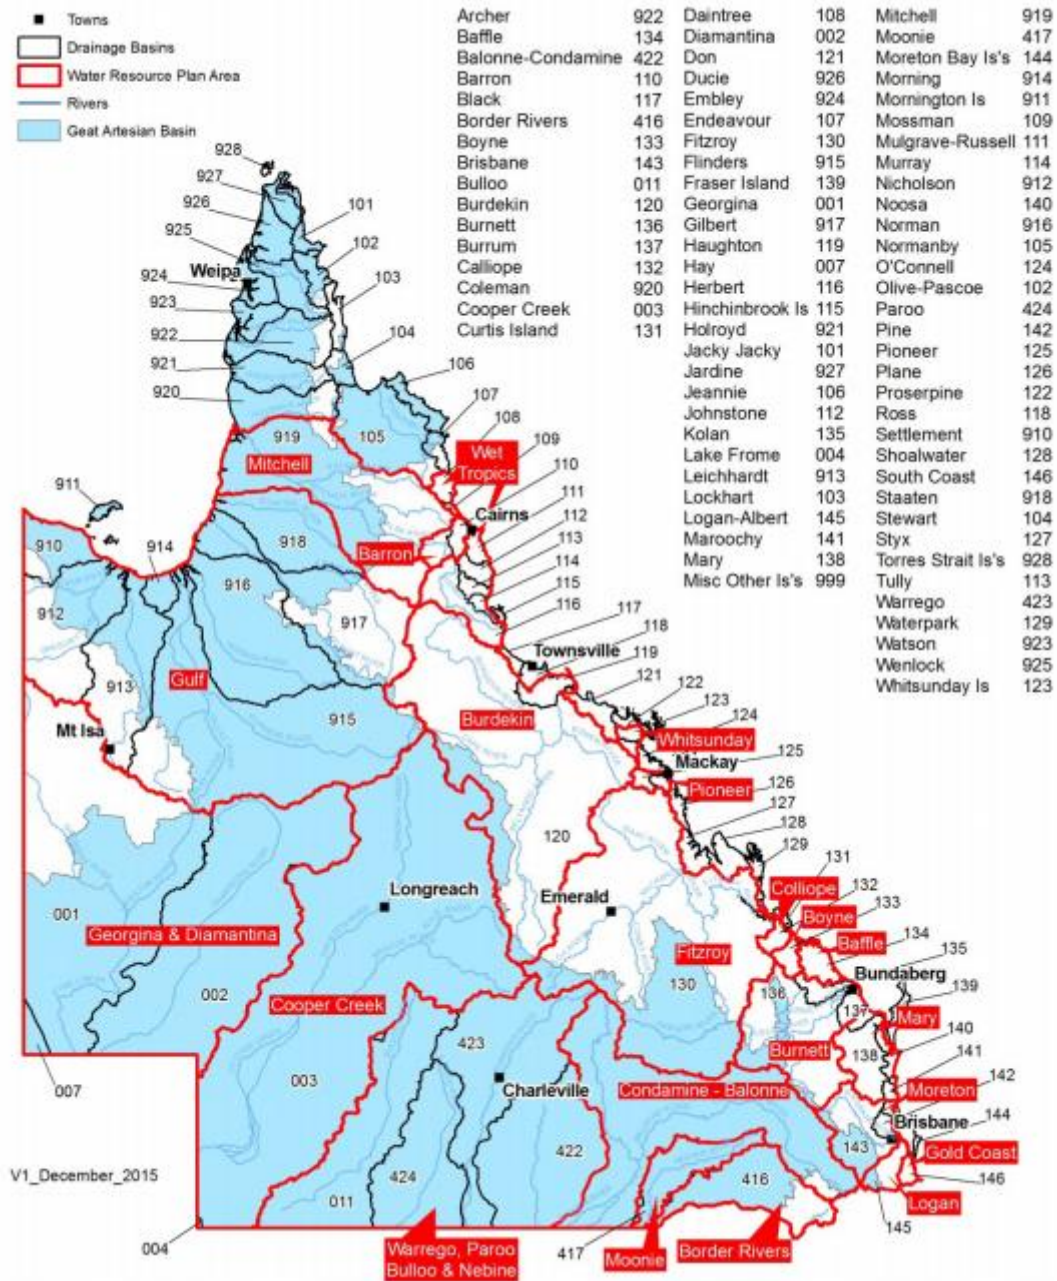

The Stream Gauging Station Network is operated by trained hydrographic staff within a quality management environment accredited under ISO standard 9001:2015. Streamflow measurements are an integral part of producing volumetric discharge data at gauging stations. Stream gaugings are taken throughout a full range of low and high flow conditions to enable derivation of accurate streamflow volumes.

## 2. Description of network list headings

Heading	Meaning	Description
<b>STATION</b>	Station ID	A unique identifier for the station.  The numbering system is based on Australian Water Resource Council drainage basin numbering comprised of seven (7) numbers and one (1) letter.
<b>STNAME</b>	Station name	A unique name for the station.
<b>REGION</b>	Region	The Departmental region operating the station.
<b>OFFICE</b>	Office	The Departmental office operating the station. AYR: Ayr BBG: Bundaberg BNE: Brisbane INF: Innisfail MBA: Mareeba MKY: Mackay RCK: Rockhampton TBA: Toowoomba
<b>STNTYPE</b>	Station type	G = time series flow data are collected at the site. GQ = both time series flow and water quality data are collected at the site.
<b>LATITUDE</b>	The geographic coordinates of the station. Details are given in degrees to 4 decimal places, although accuracy to this level is not guaranteed.	
<b>LONGITUDE</b>		
<b>AMTD</b>	Adopted Middle Thread Distance	This distance in kilometres along the middle of the river upstream from its mouth or junction with another watercourse.
<b>AREA</b>	The area of the catchment above the stream gauging station in square kilometres.	
<b>WQ network</b>	Identifies if the gauging station is also listed on the Department's WMP014 Surfacewater Ambient Water Quality Network 2019-20.	

### 3. Queensland drainage basins

This map shows the Queensland drainage basin numbering used in the stream gauging station numbering system.

### 4. Feedback

We welcome your feedback. Please contact us at [water.monitoring@dnrme.qld.gov.au](mailto:water.monitoring@dnrme.qld.gov.au) with the subject heading 'Water Monitoring Information Data Portal Feedback'.

To help us continue to improve the way we provide data, please complete a brief [DNRME Water Monitoring Customer Feedback and Satisfaction Survey](#).
