Summary

This document lists the stream gauging station sites which make up the Department of Natural Resources, Mines and Energy's stream height and stream flow monitoring network (the Stream Gauging Station Network).

Data collected under the Stream Gauging Station Network are available for free download from the Water Monitoring Information Portal at <https://water-monitoring.information.qld.gov.au/>.

Other data types are also collected at stream gauging stations, including rainfall and water quality. Further information is available on the Water Monitoring Information Portal under each site listing.

Network background

The department manages, operates and maintains approximately 400 stream gauging stations across Queensland. Approximately 170 of these sites also collect time series water quality information including conductivity and temperature. The primary driver for the collection of data under the Stream Gauging Station Network is to meet legislative requirements defined in the *Water Act 2000* (Qld).

Data collected at sites on the Stream Gauging Station Network also provides information for the Bureau of Meteorology's Queensland flood warning services.

The Stream Gauging Station Network is operated by trained hydrographic staff within a quality management environment. The quality management system (QMS) is certified to meet ISO standard 9001:2015. Stream gaugings are taken throughout a full range of low and high flow conditions at each site on the Stream Gauging Station Network to enable derivation of accurate streamflow volumes. Streamflow measurements are an integral part of producing volumetric discharge data at a site.

In accordance with requirements of the QMS requirements, the department reviews its water monitoring networks every three to five years to ensure they remain fit-for-purpose and meet the primary requirements as defined in the *Water Act 2000* (Qld). The most recent network review was undertaken in 2018 and this document incorporates initial changes made to the network in response to recommendations from the surface water network review.

The Stream Gauging Station Network is also updated annually outside of reviews based on operational requirements and through a formal request for change process.

Network list headings

A description of the headers in the network site list is provided below.

Table 1 – Network site list descriptions

Header	Meaning	Description
STATION	Gauging station number	A unique identifier for the site. The numbering system is based on Australian Water Resource Council drainage basin numbering comprised of seven (7) numbers and one (1) letter (See Figure 1).
NAME	Gauging station name	A unique name for the site.
TYPE	Gauging station type: G	Time series flow data are collected at the site.
	Gauging station type: GQ	Time series flow and water quality data are collected at the site.
REGION	Region	The departmental region operating the site.
OFFICE	Office	The departmental office operating the site. AYR: Ayr BBG: Bundaberg BNE: Brisbane INF: Innisfail MBA: Mareeba MKY: Mackay RCK: Rockhampton TBA: Toowoomba
LAT	Latitude	The geographic coordinates of the site. Coordinates are given in degrees to 4 decimal places, although accuracy to this level is not guaranteed.
LONG	Longitude	

AMTD	Adopted Middle Thread Distance	This distance along the middle of the river upstream from its mouth or junction with another watercourse in kilometres.
AREA	The area of the catchment above the site in square kilometres.	

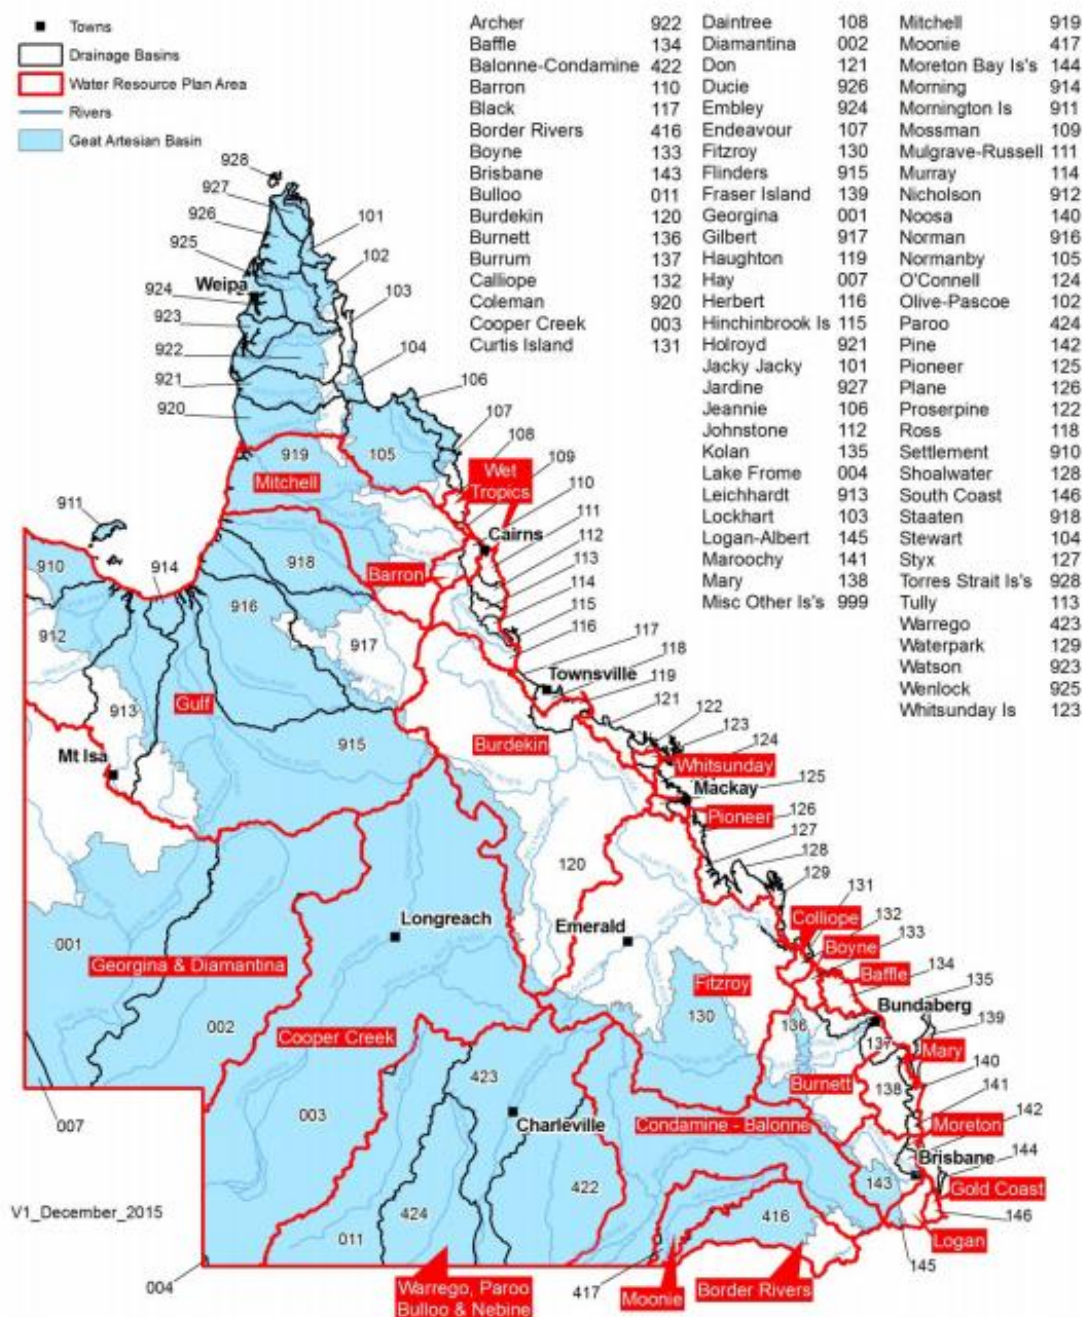

Figure 1 – Queensland drainage basins

Customer feedback and satisfaction

To help us continue to improve the way we provide data, please complete a brief [Water Monitoring Customer Feedback and Satisfaction Survey](#).
